WINTERIZE PORT-A-COOL®

With the arrival of cooler weather, now is the time for owners of Port-A-Cool® units to prepare for cold weather storage of Port-A-Cool® units. Correct storage is fundamental to keep Port-A-Cool® units operating at top performance when needed.

Vinyl Cover

4 Steps to storage

1. Drain all water from the sump tank and clean, ensuring that the pads and sump are completely dry.

2. Clean out the in-line strainer. Remove the spray bar and clean out any debris. Reinstall after cleaning.

3. Disconnect and roll up any electrical power cords and any hoses so that they will not be trampled on, tripped over or caught in equipment.

4. Cover the Port-A-Cool® unit completely to prevent dust build-up and store the unit in a dry area. This also helps prevent damage to the pads for longer pad life.
